

Uninsured Rates for Latino Children Vary Across Florida

In Florida, the uninsured rate for children overall is higher than the national average (7.8% vs. 5.2%). Additionally, Latino children are almost 1.5 times as likely to be uninsured than other children in the state (9.6% vs. 7.0%). Counties and Congressional districts with large Latino child populations are more likely to have large numbers of uninsured Latino children, but state and local policies have an impact on the coverage rates. In Florida, District 27 (Coral Gables) has the lowest Latino child uninsured rate at 6.2%, whereas 15.1% of Latino children are uninsured in District 20 (Delray Beach). Improving culturally and linguistically competent outreach in areas with high uninsured rates could help reach more Latino children.

Latino child uninsured rate by Congressional District, 2018

Number & Rate of Uninsured Latino Children by Congressional District in Florida, 2018

Congressional District (Geographic Reference Point)	Number of Uninsured Latino Children, 2018	Uninsured Rate of Latino Children, 2018
